

ABSTRACT of the Disclosure

A method of removing mycotoxins from animal feeds is described whereby a combination of a modified yeast cell wall extract and a mineral clay is fed to animals in amounts sufficient to inactivate mycotoxins present in the feeds. The yeast cell wall extract/clay mixture may be admixed with feeds, incorporated directly into pelleted feeds, or fed directly to animals.

The first two columns of the table show the number of
 observations and the number of observations with non-missing
 values for each variable. The third column shows the
 number of observations with non-missing values for each
 variable. The fourth column shows the number of
 observations with non-missing values for each variable.
